

Project Specification — Best Invest Properties MVP

Version: 1.3

Date: 30 September 2026

Platform: Bubble (no-code)

Connected services: Make, OpenAI, SendGrid (email)

This document describes what the first version (MVP) of the platform does: who uses it, which screens it has, how each screen works and which rules apply. The screens follow the approved prototype. Numbers shown in the prototype are test data.

1. What we are building

Best Invest Properties is a platform for investment property in **Southern Europe**. The initial markets are **Spain and Cyprus**.

- **Investors** find a specific available unit, compare its figures and score, and ask Best Invest for an introduction to the developer.
- **Developers** get verified, submit projects and keep prices and availability up to date.
- **The Best Invest team** checks everything before it is published and approves every introduction.

The platform is not a financial adviser and does not handle payments or sales. Its value is a checked catalogue with clear figures, a reviewed written analysis and controlled introductions.

2. Users

User	What they can do
Visitor (not signed in)	browse the catalogue, open any property, see its score, yields and full investment analysis, use the calculator
Investor	everything a visitor can, plus: save properties and searches, save calculator scenarios, compare, send enquiries, see their dashboard and settings
Developer	apply and get verified, manage their company profile, submit projects and units, request price/availability changes, see their leads
Admin (Best Invest team)	verify developers, review and publish projects, approve introductions and listing changes, manage the score model and users

There is one admin type in the MVP. Every important admin action needs a confirmation and is recorded in the history log. Admin accounts are created by another admin; there is no self-registration.

3. How the system fits together

Part	What it does
Bubble	the website, the database, all calculations (yields, score) and all emails
Make	collects comparable rental listings from property portals and requests the AI text from OpenAI
OpenAI	writes the investment analysis text and helps prepare proposed figures and assessments for the admin to check
SendGrid	delivers the emails that Bubble sends

The rule behind this split: **fixed calculations are always done by the platform; anything proposed with AI assistance is checked by the admin before it is used** (see 6.3).

4. Screens

The number in brackets is the screen number in the approved prototype.

Public site and investor

Screen	What it is for
Landing (01)	first page: search form, how it works, featured properties
Browse (02)	the catalogue with filters, sorting and the Top 5 list
Property (04)	one unit: photos, price, availability, figures, score
Investment Analysis (05)	the score breakdown, sources and the written analysis
Calculator (06)	the investor's own return scenario
Compare (07)	up to five properties side by side
Registration (08)	investor sign-up
Login (15)	investor sign-in
Forgot password (24)	password reset
Investor Dashboard (09)	saved properties, saved searches, enquiries
Account Settings (25)	contact details, criteria, consents, password, account closure
Privacy (17), Terms (18)	legal pages

Developer

Screen	What it is for
For Developers (16)	information page for developers
Developer Sign-up (19)	the application form
Verification Status (26)	application status, re-uploading documents
Company Profile (27)	company details
Developer Portal (10)	the developer's home screen
Add / Edit Project (11)	the project and unit editor
My Projects (20)	list of the developer's projects

Screen	What it is for
Project & Units (21)	units, prices, availability, change history
Leads (22)	enquiries about the developer's units

Admin

Screen	What it is for
Admin Login (31)	staff sign-in
Dashboard (12)	key counters, the next project to review, new enquiries
Approvals (23)	one queue for all decisions
Project Review (28)	full review of a submitted project, including the analysis
Developer Verification (29)	checking a developer's documents
User Management (30)	investors and developer contacts
Score Editor (13)	score weights and model versions

The admin menu has four items: **Dashboard** · **Approvals** · **Investors** · **Investment Scores**. Project Review and Developer Verification open from the Approvals queue.

Ideas to scope separately (not part of this release): Country Fact Sheets, an editor for updating them, and a blog.

5. Main journeys

Investor: from search to introduction

1. The visitor sets country, budget, property type and minimum yield on the landing page.
2. The catalogue opens with these filters applied.
3. The visitor opens a property, reads the analysis, tries the calculator and compares properties.
4. To send an enquiry, the visitor signs in or registers.
5. The investor confirms consent to share their contact details and sends the enquiry.
6. The admin reviews the enquiry and approves the introduction.
7. Both sides receive an email with each other's contact details.
8. The investor follows the status on their dashboard; the developer sees it in Leads.

Developer: from application to verified portal

1. The developer fills in the application and uploads company documents.
2. The admin checks the documents one by one.
3. The admin approves, rejects, or asks for more information.
4. Once approved, the developer can add projects.

Developer: from project to publication

1. The developer creates a project, adds unit types, units, photos and documents.
2. The developer submits it for review; during review it cannot be edited.

3. The admin reviews the project and the financial estimates, then approves it or asks for changes.
4. The admin publishes it as a separate step. Published units appear in the catalogue.

Developer: price or availability change

1. After publication the developer can change only **price** and **availability** (Available / Reserved / Sold).
2. The change waits for admin approval; the unit shows "Price change pending approval".
3. After approval the figures and the score are recalculated automatically.
4. All other fields are locked; changing them needs a new review.

6. Features

6.1 Catalogue

Filters (left column, applied immediately):

Filter	Values
Country	Cyprus, Spain
Property type	Apartment, Villa, House
Bedrooms	Studio, 1, 2, 3+
Strategy	Long-term rental, Short-term rental, Mixed with private use, Capital growth
Completion	Ready, less than 12 months, 12-24 months
Maximum price	slider from €100k to €600k+ (the top position means no upper limit), so an investor can set their budget even if no current listing is that low
Minimum gross yield	slider 4% – 10%, default 6%
Minimum net yield	slider 3% – 8%, default 4.5%

- **Sorting:** net yield (default), gross yield, investment score, price.
- **8 properties per page**, with page numbers and "Showing X-Y of N properties".
- **Top 5** list next to the results, following the current sorting. On mobile it moves above the list.
- **Capital-growth properties** (bought mainly for price growth rather than rent) are found with the Strategy filter "Capital growth". When this strategy is selected, the yield filters do not hide them. They can be sorted by investment score or price; when sorting by yield, properties without a rental yield appear at the end.
- An investor can add properties to **Compare** straight from the cards — up to five.
- On mobile the filters open in a slide-out panel.

What needs sign-in: browsing, property pages, scores and the full analysis are open to everyone. Saving a property, saving a search, saving a calculator scenario and sending an enquiry need an account.

6.2 Property page

- Price, availability, unit details, project facilities, photos, score and financial figures.
- **Two sets of rental figures, shown separately:** the developer's claimed rent and yield, and the platform's reviewed rent estimate and calculated yield.
- The developer's name and contacts are **never shown**. The page says "Introduced by Best Invest".
- If the unit is sold or withdrawn, the page says so and suggests similar properties.
- After an enquiry is sent, the button is replaced by a confirmation with the enquiry reference.

6.3 Investment score

The score is out of 100 and has **five categories**:

Category	Points
Rental Income & Net Yield	30
Rental Demand & Tenant Quality	20
Purchase Value & Market Position	20
Growth & Resale Potential	15
Risk & Investor Protection	15

Fixed calculations and AI-assisted assessments. The platform separates two kinds of figures:

Kind	Examples	Who produces it
Fixed calculations	acquisition cost, gross yield, net yield, points from each rating, the total score	calculated by the platform, always the same way
Proposed figures and assessments	market rent estimate, operating costs, estimated fair market value, comparable properties, category ratings that need judgement (demand, growth, risk)	may be proposed with AI assistance; the admin checks and approves them before they are used

Nothing proposed with AI assistance reaches investors without the admin's approval.

How the score is calculated. Each category gets a **rating from 0 to 10**. The platform turns it into points: $\text{points} = \text{rating} / 10 \times \text{category weight}$. The total score is the sum of the five category points (maximum 100).

1. Rental Income & Net Yield (30). Rated from the net yield:

Net yield	Rating
< 2%	0
2–2.49%	1
2.5–2.99%	2
3–3.49%	3
3.5–3.99%	4

Net yield	Rating
4–4.49%	5
4.5–4.99%	6
5–5.99%	7
6–6.99%	8
7–7.99%	9
≥ 8%	10

For example, a net yield of 5.6% gives 7/10, which is 21/30. Net rental income is the gross rental income minus vacancy, management, maintenance, insurance, property tax, community fees and other recurring costs. Costs are counted here only; the Risk category assesses whether they are uncertain or likely to rise, so they are not counted twice.

2. Rental Demand & Tenant Quality (20). How easy the property is to rent, and who is likely to rent it. Factors include occupancy, vacancy periods, time to find a tenant, the likely tenant profile, long-term versus short-term demand, competing properties, supply and demand, and seasonality. The rating must be based on evidence, not simply an AI opinion:

Rating	Description
0	Extremely weak demand; severe vacancy risk
1	Very weak
2	Weak
3	Below average
4	Slightly below average
5	Average
6	Moderately strong
7	Strong
8	Very strong
9	Exceptional
10	Extremely strong and diversified demand

3. Purchase Value & Market Position (20). Compares the **total acquisition cost** (price plus purchase taxes, legal, notary and registration fees, furniture and other acquisition costs) with the **estimated fair market value**. The fair market value is estimated from comparable properties (€/m², similar new and resale properties in the same area, property type, floor, view, amenities, parking, terrace and condition) and must come with a **reliability note**.

Position versus estimated fair market value	Rating
≥ 30% overpriced	0
25–29.9% above	1
20–24.9% above	2
15–19.9% above	3

Position versus estimated fair market value	Rating
10–14.9% above	4
5–9.9% above	5
Around market value	6
5–9.9% below	7
10–14.9% below	8
15–19.9% below	9
≥ 20% below	10

4. Growth & Resale Potential (15). Assessed from three internal components: future capital appreciation (50%), future rental appreciation (25%) and resale liquidity (25%). The category rating combines them in these proportions (for example 8, 7 and 9 give 8.0/10).

Rating	Description
0	Very weak
1	Extremely limited
2	Weak
3	Below average
4	Slightly below average
5	Average
6	Moderately positive
7	Strong
8	Very strong
9	Exceptional
10	Extremely strong

5. Risk & Investor Protection (15). In the original scoring proposal this category is also called "Risk, Costs & Investor Protection"; the interface keeps the name "Risk & Investor Protection". Assessed from four internal components: legal/owner protection (35%), property/operational costs (25%), regulatory risk (20%) and physical/market/security risks (20%). Country-level legal risk and property-level security are assessed separately. More points means **lower** risk — this is written next to the scale.

Data reliability. Where the available sources are insufficient, the assessment is shown as **preliminary**, with a disclaimer and a short note on data quality; estimates and missing information are identified.

What is shown in the MVP: the five category scores, the total score and the net yield, with a short explanation for each category. The internal factors and components guide the analysis but are not shown as separate items.

Still to be agreed:

- scoring guidelines for Rental Demand, Growth & Resale and Risk — the rules for which evidence leads to a higher or lower rating beyond the level descriptions above (to follow in a separate e-mail);
- level descriptions for Risk & Investor Protection;
- the score thresholds for the "Strong Investment" and "Solid Investment" labels.

Later, after the MVP: detailed sub-scores in the interface, tenant-profile percentages and a numerical Data Confidence score.

The analysis screen also shows the **Sources, assumptions & gaps** block, where every fact is tagged `SOURCE`, `DEVELOPER`, `ESTIMATE` or `GAP`. If the AI text is not ready, the page still shows the score breakdown.

6.4 Where the figures come from

Figure	Source
Price, size, completion date	the developer
Developer's claimed rent	the developer — stored separately, never used automatically
Market rent estimate	comparable rental listings from approved portals, reviewed by the admin
Running costs	approved averages for the country
Vacancy allowance	platform settings
Purchase taxes and costs	official country rates, checked by a tax consultant
Estimated fair market value	comparable properties, with a reliability note; may be proposed with AI assistance, reviewed by the admin
Acquisition cost, gross yield, net yield	calculated by the platform

Rent estimate:

- comparable rentals are grouped by country, district, property type, bedrooms and size, and assessed using relevant features such as a pool, parking or a gated area; the platform shows a range and a median;
- if a portal has no data feed, the listings can be entered by hand;
- the admin approves every estimate before it is used.

On Project Review the admin sees the developer's claimed rent, Best Invest's comparable rent and the rent used for the score side by side.

6.5 Calculator

- Inputs: purchase price, monthly rent, occupancy, management fee. There are no mortgage, deposit, interest-rate or loan-term inputs.
- The **long-term / short-term** switch sets the rental strategy. The **base / average / best case** switch sets the rent.
- Country purchase costs and running costs are added automatically.
- A property still under development shows **no rental income before its expected completion date**.

- **5- and 10-year projections** have been requested; how they are calculated and whether they are included in the first release are still to be agreed.
- Errors are shown under the field, and the result is not shown until they are fixed (e.g. "Enter a purchase price above zero.").
- Saving a scenario needs an account.

6.6 Compare

- Up to **five** properties; adding a sixth shows a message.
- Rows: price and acquisition cost, rent and net yield for base / average / best case, gross yield, investment score, the five score categories, size, completion.
- The best value in each row is highlighted.

6.7 Registration and sign-in

- **Investor registration:** full name, email, password (at least 8 characters with a number) — required; phone and country — optional. Consent to Terms and Privacy, plus a **separate** marketing consent.
- Email and password only — no Google sign-in in the MVP.
- **Investor login:** email and password, "Keep me signed in", a link to developer sign-in.
- **Admin login:** a separate staff screen (email and password), locked after too many failed attempts.
- There is no two-factor sign-in in the MVP.
- **Forgot password:** four steps — request, email sent, new password, done. The message never reveals whether an account exists.

6.8 Investor dashboard and settings

- Dashboard: investment criteria, recommended properties, saved properties (with "price changed" / "status changed" badges), saved searches, enquiries and their status.
- Saved searches are saved filters to reopen later. When a new property matching a saved search is published, the investor receives an email.
- Settings: contact details, criteria, consents, password change, account closure (with a reason; records linked to completed introductions are kept in line with the platform's retention policy, whose retention period is subject to legal review).

6.9 Developer application

- **Company:** registered name, registration number, country, developer licence number (required); website, years active (optional).
- **Contact:** name, work email, phone, password (required); role (optional).
- **Portfolio:** projects completed, projects currently selling, typical unit price.
- **Documents:**

Document	Level
Company registration certificate	required before verification
Developer licence	required before verification
Building permit for the first project	to confirm — needed before the project is published
Escrow or bank guarantee	to confirm — off-plan only

Document	Level
Two client or bank references	optional

The document list is a setting per country, not fixed in the build. After submitting, the developer gets a reference (e.g. APP-0142) and sees the status: under review, more information needed, or rejected.

6.10 Project editor

- Project: name, location, GPS, completion date, number of units, type — **single property** or **complex**.
- Facilities: communal pool, gym, gated area, underground parking, tennis/golf, concierge, lift, landscaped gardens.
- Units: number, bedrooms, bathrooms, area, price, expected rent. Units can be duplicated.
- Photos with a chosen cover; floor plans assigned to a unit type.
- Actions: **Save draft**, **Discard draft**, **Submit for review** — each with a confirmation.
- A project can be submitted with only some of its units entered; all units are needed before publication.

6.11 Leads and introductions

- The developer sees each lead's reference, unit, budget band and stage — but **no investor contact details** until Best Invest approves ("Contact details released after Best Invest approves").
- After approval, the investor's name, email and phone appear on the lead.
- The developer is expected to make first contact within **five working days**.
- The developer records the outcome (e.g. viewing booked, reserved, not interested).

Admin decisions on an introduction:

Decision	Emails	Result
Approve & connect	to the investor and the developer	contacts shared, status "Connected"
Hold	none	status "On hold"; reason and follow-up date required
Decline	to the investor only — a neutral message with three similar properties	status "Declined"; the admin enters a short reason in a free-text field — an internal note that neither the investor nor the developer sees; the developer sees only a count of filtered-out requests

Before approval a warning says that contact details cannot be recalled once sent.

6.12 Admin area

- **Dashboard:** five counters (registered investors, active developers, published properties, new enquiries, hot leads), the next project to review, and a table of new enquiries.
- **Approvals:** one queue with five tabs — All, Project submissions, Developer applications, Introductions, Listing changes — plus filters by age, overdue follow-up and status.
 - Hold, Query and Reject need a reason, and Hold and Query also need a follow-up date. For Decline, the admin enters a short reason in a free-text field — an internal note that neither the investor nor the developer sees; the investor receives a neutral

message.

- After a decision there is no Undo: the admin can **Reopen** a held or declined request, or **Correct status**.
- **Project Review:** the analysis panel with the figures, the proposed financial estimates with their sources, the five category scores and the sources/gaps list. Nothing is visible to investors until the admin approves it.
- **Score Editor:** five weight sliders (0-100%, must total 100%; a warning if one category is above 50%), recalculation of all properties with a progress bar, and a small table of model versions. Going back to an older version creates a new version.
- **User Management:** a list of users with the Suspend action (reason required).

6.13 Emails

All emails are sent by the platform.

Event	Who receives it
Email verification, password reset	the user
Developer application received; verification decision	the developer
Project decision: changes requested / approved / published / rejected	the developer
Price or availability change: queried / approved / rejected	the developer
Enquiry received	the investor
Introduction approved	the investor and the developer
Enquiry on hold	nobody
Enquiry declined	the investor only, in neutral wording
Price or availability of a saved property changed	investors who saved it or have an open enquiry
New property published that matches a saved search	investors with that saved search

6.14 Legal pages

- The final wording of the legal pages still needs legal review.
- No governing law or jurisdiction is assumed yet.
- Commission is not described as applying only in some cases.
- The disclaimers state that projected and actual returns **may differ**.

7. Enquiry statuses

One status, shown with different wording to each user:

Stage	Admin sees	Investor sees	Developer sees
Submitted	New	Request received	—
Being checked	Qualifying	Awaiting analysis	—
Checked, waiting for decision	Hot lead / Awaiting you	Awaiting admin approval	Awaiting admin approval

Stage	Admin sees	Investor sees	Developer sees
On hold	On hold	Under review	On hold
Declined	Declined	Not available	Filtered out by Best Invest
Introduction being sent	Connecting	Introduction being prepared	Introduction being prepared
Introduced	Connected	Developer contacted	Introduced
Developer responded	In progress	Developer responded	Contacted
Completed	Converted	Completed	Converted
Closed	Closed	Closed	Closed
Cancelled	Cancelled	Cancelled	Cancelled

"—" means the developer does not see the enquiry at that stage.

8. Key rules

1. **Nothing is public without admin approval** — developers, projects, figures, AI text.
2. **The developer stays anonymous** in the catalogue; contacts are shared only after investor consent and admin approval.
3. **The developer's rent claim is never used as the market rent** without checking.
4. **After publication only price and availability can change**, and only with admin approval.
5. **Fixed calculations are always done by the platform**; anything proposed with AI assistance — figures, assessments or text — is used only after admin approval.
6. **A new score model never overwrites old scores** — they stay in history.
7. **Account closure** blocks access immediately; records required by law are kept.
8. **Privacy is enforced by the database rules**, not just by hiding things on screen.
